## Notes/Narratives

### NARRATIVE

#### INFORMATION:

On 7/30/12, I responded to the area of the 500 block of Lake on the report of a trouble with. Upon arrival I contacted Paul Ruesch who is the site manager for the Environmental Protection Agency doing clean up on the Kalamazoo River and that area. Ruesch informed me that there were two large, sound, attenuating pumps that someone had opened and sprayed a dry chemical fire extinguisher on the motors. Ruesch does not believe there was damage to them, but wanted it reported in case there was. Ruesch informed me that the owner of the pumps was Baker Corp. based out of Chicago with a point of contact named Rich Gothels who also arrived on scene.

#### INTERVIEW WITH REPORTEE (Ruesch):

Ruesch who is employed by the EPA stated that they had set the large pumps in the 500 block just west of Kalamazoo River as they were getting ready to drain and dredge that portion of the river and clean up efforts stemming from an oil spill a few years back. Ruesch stated that the pumps belonging to Baker Corp. were used once the river was drained and had been positioned there for a short time approximately one or two days and that he had not had time to put up fencing around the site like they normally do for security. Ruesch also informed me that they do hire a private security company to patrol the area and equipment at night when none of the workers are on sight.

Ruesch was informed by one of his employees that someone had opened the large side doors of the containers and closing the pumps and discovered dry chemical fire extinguisher residue on the engine area. Ruesch along with Baker Corp., Rich Gothels did not believe that there was damage to the equipment, but it was frustrating that someone had actually messed with them and he wished for it to be documented in a report and referred me to talk to Gothels reference the cost of the equipment.

#### PROPERTY:

The sound attenuating pumps are 12" hose valued at approximately one hundred and twenty thousand dollars and are approximately eight feet tall, twelve feet long and six feet wide with access doors on the sides. The two pumps were serialized with numbers of PU12153SA and PU12152SA. Once again Ruesch did not believe the dry chem. Did any damage to them, but would contact the apartment once they were checked out and if there was damage found.

#### ADDITIONAL INFORMATION:

While in the area I was contacted by the resident at 504 Lake, which is directly across from the area where the equipment was sitting. He identified himself as Ron Marsh and told me that he had seen kids playing in the area the day before and it was possible they had something to do with the dry chem extinguisher being sprayed into the equipment's engine area. He had found a dry chem extinguisher on his front yard and turned it back over to one of the employee's but was not sure who it went to or who it belonged to.

#### DVR:

DVR in vehicle 1163 was in use.

#### CONCLUSION:

I provided Ruesch with a KDPS case card and case number and requested he contact me if there was any monetary damage to the equipment. At

## Incident/Investigation Report

### Notes/Narratives

this point he simply wanted it documented in case any additional items came up missing or damaged. The equipment was reported to be unlocked and had not been forced open. I also advised Ruesch that I would be notifying units that patrol that area to keep any eye on the equipment until the fencing was up and the equipment was less accessible by passersby.

Respectfully submitted,

PSO Joel Vanzylveld, 12236
